zero fallout, premium effect

Howard & Sons have developed an extensive range of debrisless pyrotechnics that are totally free of any fallout. These products are a premium range that have been developed to meet a niche market that dictates a zero fallout policy.

Debrisless pyrotechnics are manufactured from the highest grade of raw materials available that not only ensures consistent quality and colours but also ensures that a total burn of the pyrotechnic inserts is achieved.

Howard & Sons have deployed this debrisless technology across our entire catalogue of close proximity pyrotechnics and outdoor range of mines and comets available in 30mm to 125mm sizes.

All of the materials included in these products that are not pyrotechnic in themselves are thoroughly researched and tested. Our stringent criteria requires that these materials are completely consumed by the functioning pyrotechnic compounds and that no residue remains.

Debrisless pyrotechnics are ideally suited to applications adjacent to sensitive surfaces and aerial locations where no fall out can be tolerated.
